

THE GLOBAL CLEANTECH SUMMIT 2015

The Global Cleantech Summit 2015 takes place in Helsinki this autumn. This three-day event is coordinated by The Finnish Ministry of Employment and Economy, and executed with multiple partners representing the forefront of clean technology development in Finland.

The Summit provides an international discussion and innovation forum for the most critical questions in clean technology development: *How to enable green growth globally? How to mitigate the impacts of climate change and other pressing environmental concerns? How to succeed and take steps towards a better future with clean technology?*

As clean technologies provide us with a key to a more sustainable world, catalyzing linkages between investors, decision makers and cleantech companies is crucial in finding the answers to these questions and making a lasting change.

The main themes of the Summit cover innovations in cleantech, green transformation, global value chains, international co-operation and key enabling technologies.

A virtual brainstorming is also organized (www.globalcleantechsummit.fi) to offer everyone a chance to participate in the discussion and have a say on the next steps we need to agree upon.
